Alexander Gomez

5 years programming // 20+ years in Systems & Networking

Mainframe software developer, freelance, focused on Full-Stack with a deep, uncompromising affinity for the back-end

// A bit of background

My coding journey began just after I turned **10 years old**, writing **BASIC** on some Z80 derivatives for fun (those old Vtech clones, uhhh, what great times those were). But, if I have one regret, it's not pivoting into a hardware/software engineering career until well into my **30's**.

Somewhat chaotic, yet operating within a slightly **OCD-like** framework where almost every single detail of my life is constantly planned, prioritised, managed, and dissected as if it were a **binary tree**.

Everything is a draft to me, a learning curve, or an excuse to build simple tools that make my life easier. With an **unconfessed habit of tinkering** with almost any electronic device I can get my hands on, usually trying to reprogram it.

Even so, I genuinely wish I had better **SMD** micro-soldering and micro-electronics skills... honestly, I could spend whole days just hooking up wires to any serial port I can find.

With no particular charisma but, although I dedicated my education and career to other fields, I never stop striving to **keep learning every day**; not only new programming languages and frameworks, or getting new ways to tinker with devices, but also through learning alongside other developers.

This is my goal, my current journey.

Alexander Gomez

Jr. Software Developer | FSD | Freelance

Trainings

Data Science / BI
IFEFOR-CEBEK · 2026

Java Developer Professional Certificate
IBM Skills Network · 2026

Full Stack Development Graduate
Bottega University · 2025

IT Security Auditing & Data Protection (LOPD)
IFEFOR-CEBEK · 2023

Currently Learning

- Software Engineering
- Core Java & Spring Boot
- Data Structures & Algorithms
- BI / Data Analytics / Data Science
